The research group at GHOST-laboratory is a mixed Unit that involves personnel from the Department of Physics and Geology, at University of Perugia (Italy) and from the Istituto Officina dei Materiali (IOM) of the National Research Council.

The research activity started in 1988 with the setup of the Brillouin light scattering laboratory, equipped with a tandem-multipass Fabry-Perot interferometer. After a few years entirely devoted to the study of surface phonons in thin films, the research activity has been extended to the study of the dynamics of complex systems (liquids, glasses, polymers) and to the analysis of the magnetic properties of low-dimensional structures and magnonic crystals.

Presently, the main research lines deal with:

- Soft matter, Glasses and Biosamples;
- Nanomagnetism, Spintronics and Spin Waves;
- Elastic properties of Thin Films and Acoustic Resonators

Thematic Workshop "Advances in Brillouin Light Scattering", 12-14 Sept. 2018

12-14 Sept. 2018 – Perugia, Italy

Perugia, 25 Ottobre 2021
Aula 7, Rettorato, Piazza dell'Università, ore 9:00

Nanotecnologie in Umbria

Convegno di presentazione di attività in corso nel territorio, in vista della nuova politica regionale nel settore delle nanotecnologie.

Con la partecipazione dell'Assessorato regionale allo Sviluppo Economico e Confindustria Umbria.

(a) Magnetic Recording Roadmap

(From www.idema.org/ International Disk Drive Equipment and Material Association, that includes the world leading manufacturers, with an income of \$35 billions. Seagate and Western Digital are the main two companies)

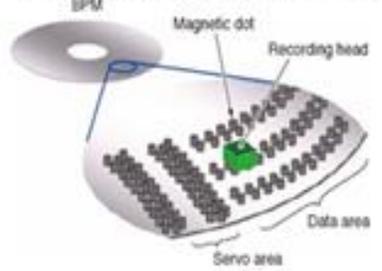

After 2021: Bit-Patterned Magnetic Recording and Heated-Dot Magnetic Recording

Sistemi Nanomagnetici:

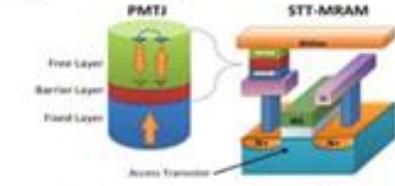

- ✓ Memorie non volatili (Hard Disk, MRAM)
- ✓ Sensori (GMR)
- ✓ Oscillatori nel range dei GHz (telecomunicazioni)
- ✓ Onde di spin con lambda micro- o nano-metrica

(b) Bit-patterned Hard Disk (BPM)

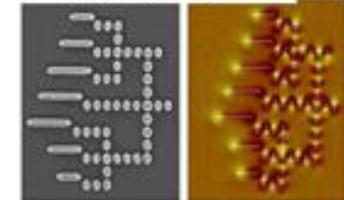

R. Griffiths et al. J. Phys. D Appl. Phys. 46, 503001 (2013)

(e) STT Magnetic RAM

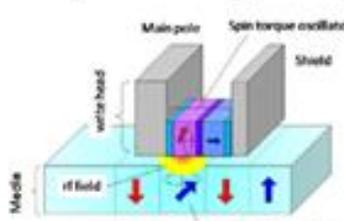

A. Kent, Nat. Nanotech. 10, 187 (2015)

(g) Nano-Magnetic Logic (NML)

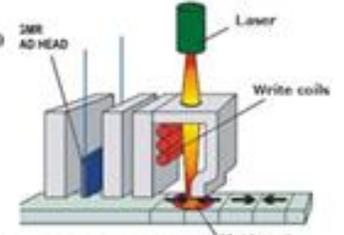

M. T. Niemier et al., J. of Physics: Cond. Mat. 49, 493202 (2011)

(c) Microwave-assisted magn. recording (MAMR)

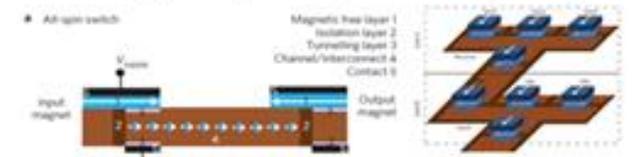

S. Okamoto et al. J. Phys. D Appl. Phys. 48, 353001 (2015)

(d) Heat-assisted magn. recording (HAMR)

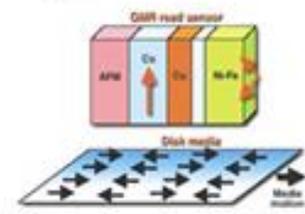

(f) All-Spin Logic Devices (ASLD)

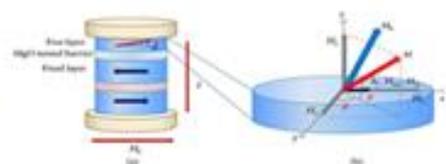

Behin Aein et al., Nat. Nanotech. 5, 266 (2010)

(h) GMR Read Head

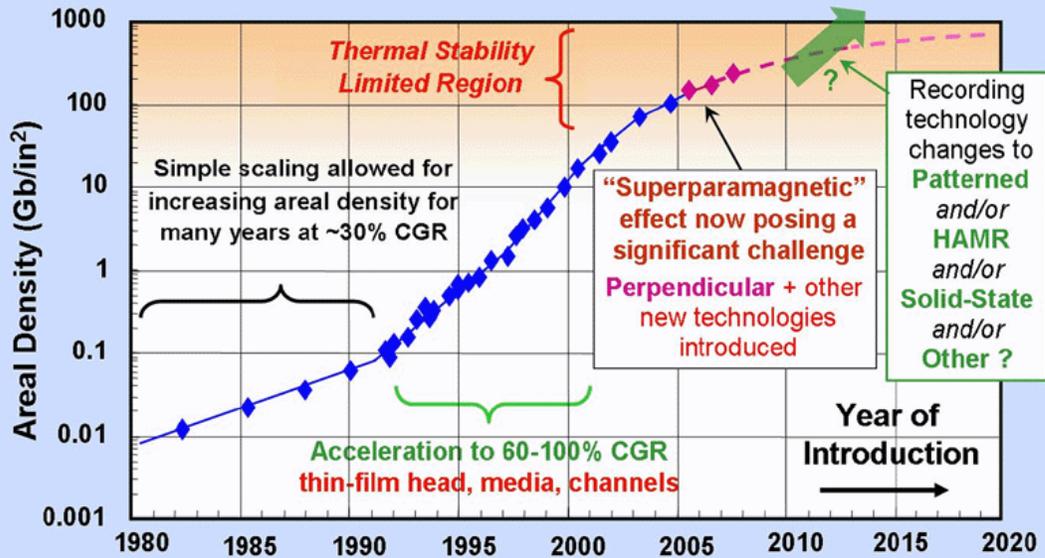

S. Thompson, J. Phys. D: Appl. Phys. 41, 093001 (2008)

(i) Spin Torque Oscillator (STO)

J.-V. Kim, Solid State Phys. 63, 217 (2012)

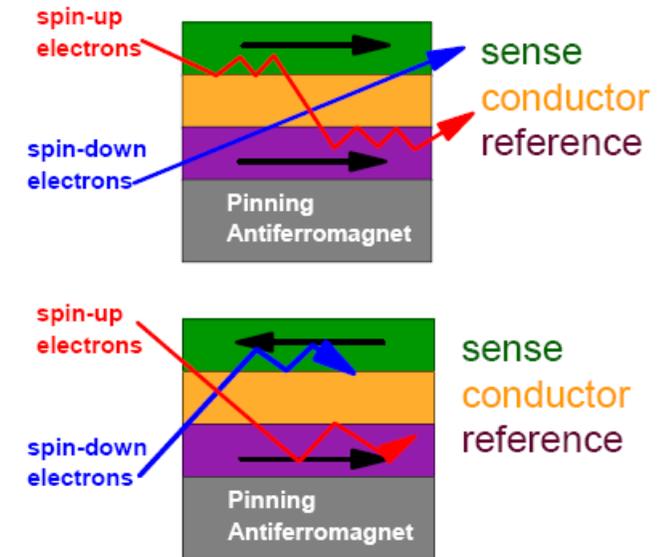

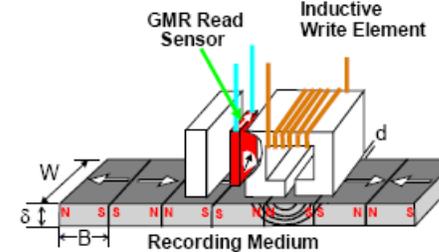

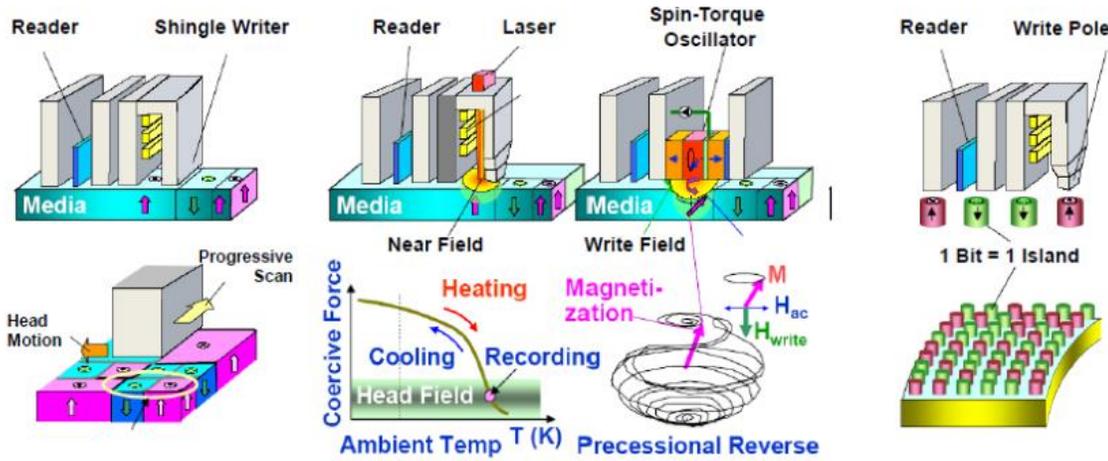

Growth of Areal Densities for Conventional Recording

Nobel prize 2007!

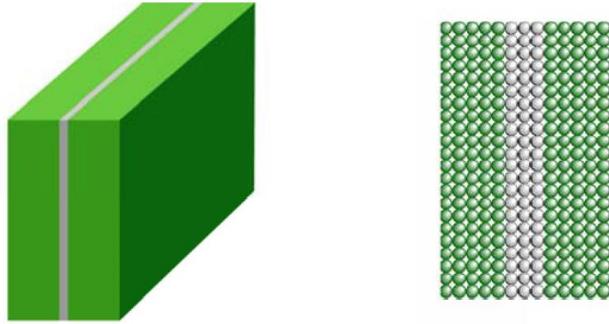

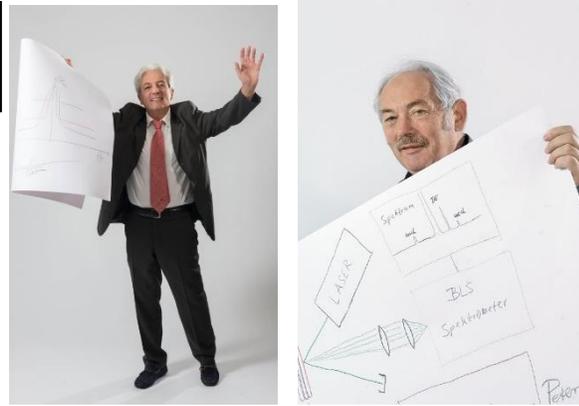

GMR sensor

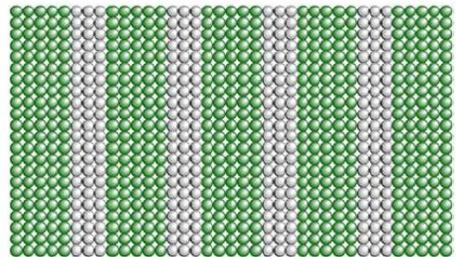

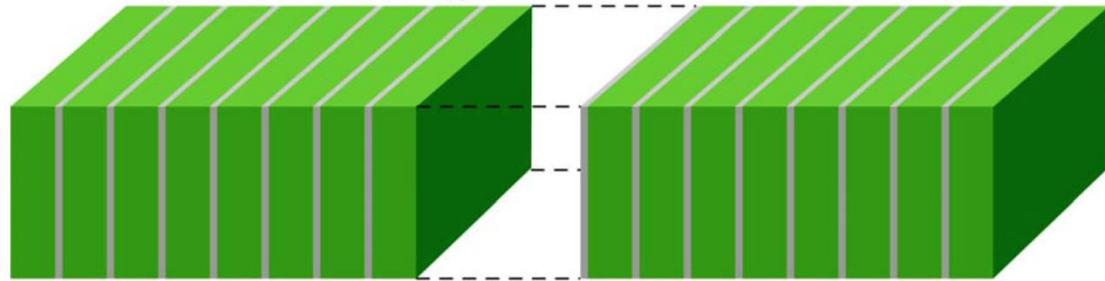

SMR/TDMR Energy Assisted Recording Bit Patterned

- Continued scaling requires innovations in systems technologies, materials science and process engineering to advance areal density

Control of atomic layers...

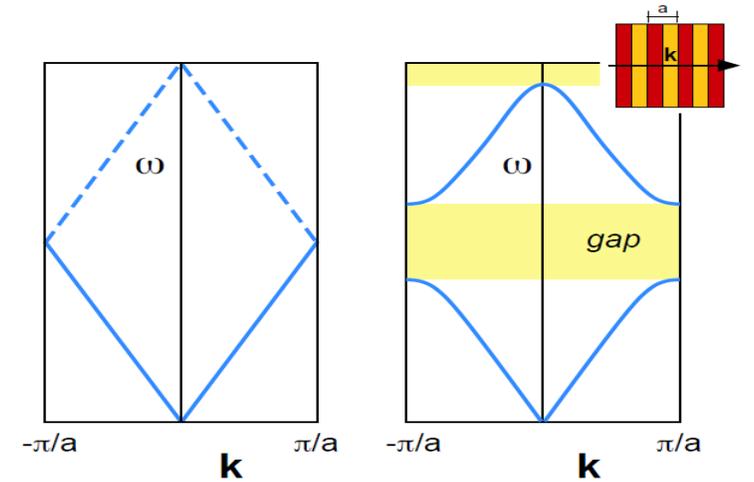

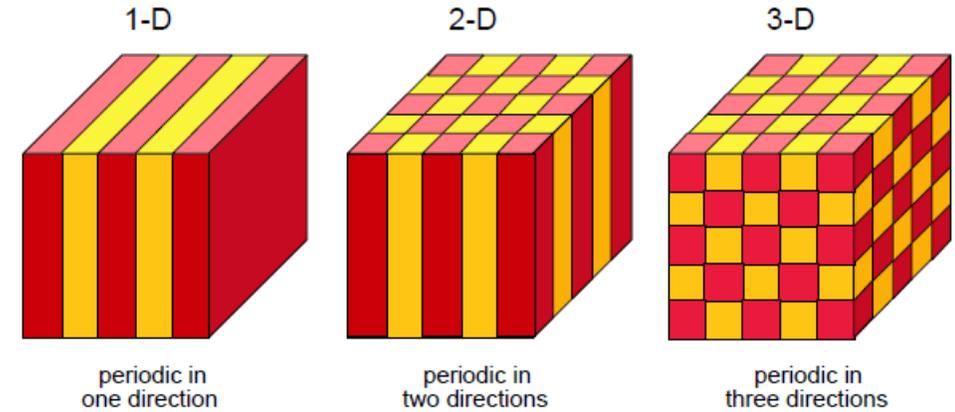

Nanometre

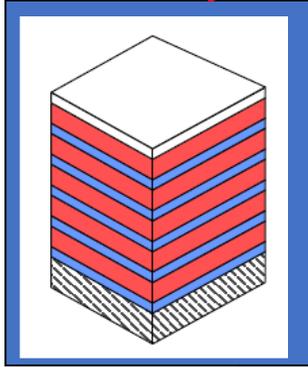

Science or/and Technology?

Artificial photonic or magnonic Crystal (PC)

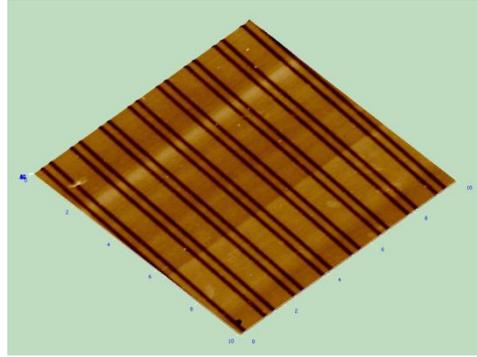

Magnonic Crystal (MC)

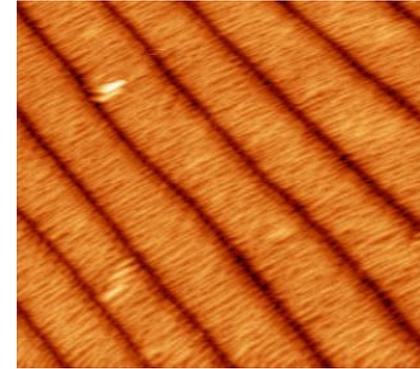

1D. Multilayer

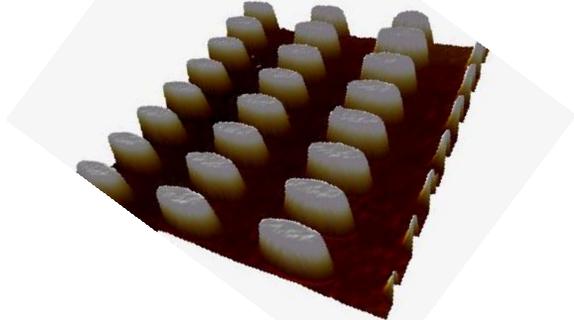

Array of interacting stripes

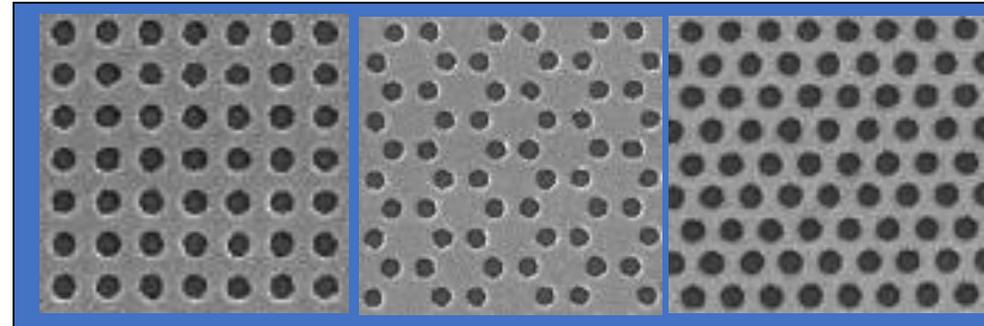

Periodic profile of magnetic properties

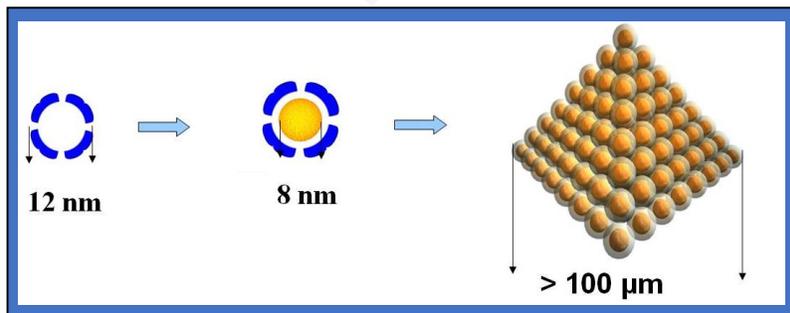

2D. Array of interacting elements

Array of holes embedded into a ferromagnetic film

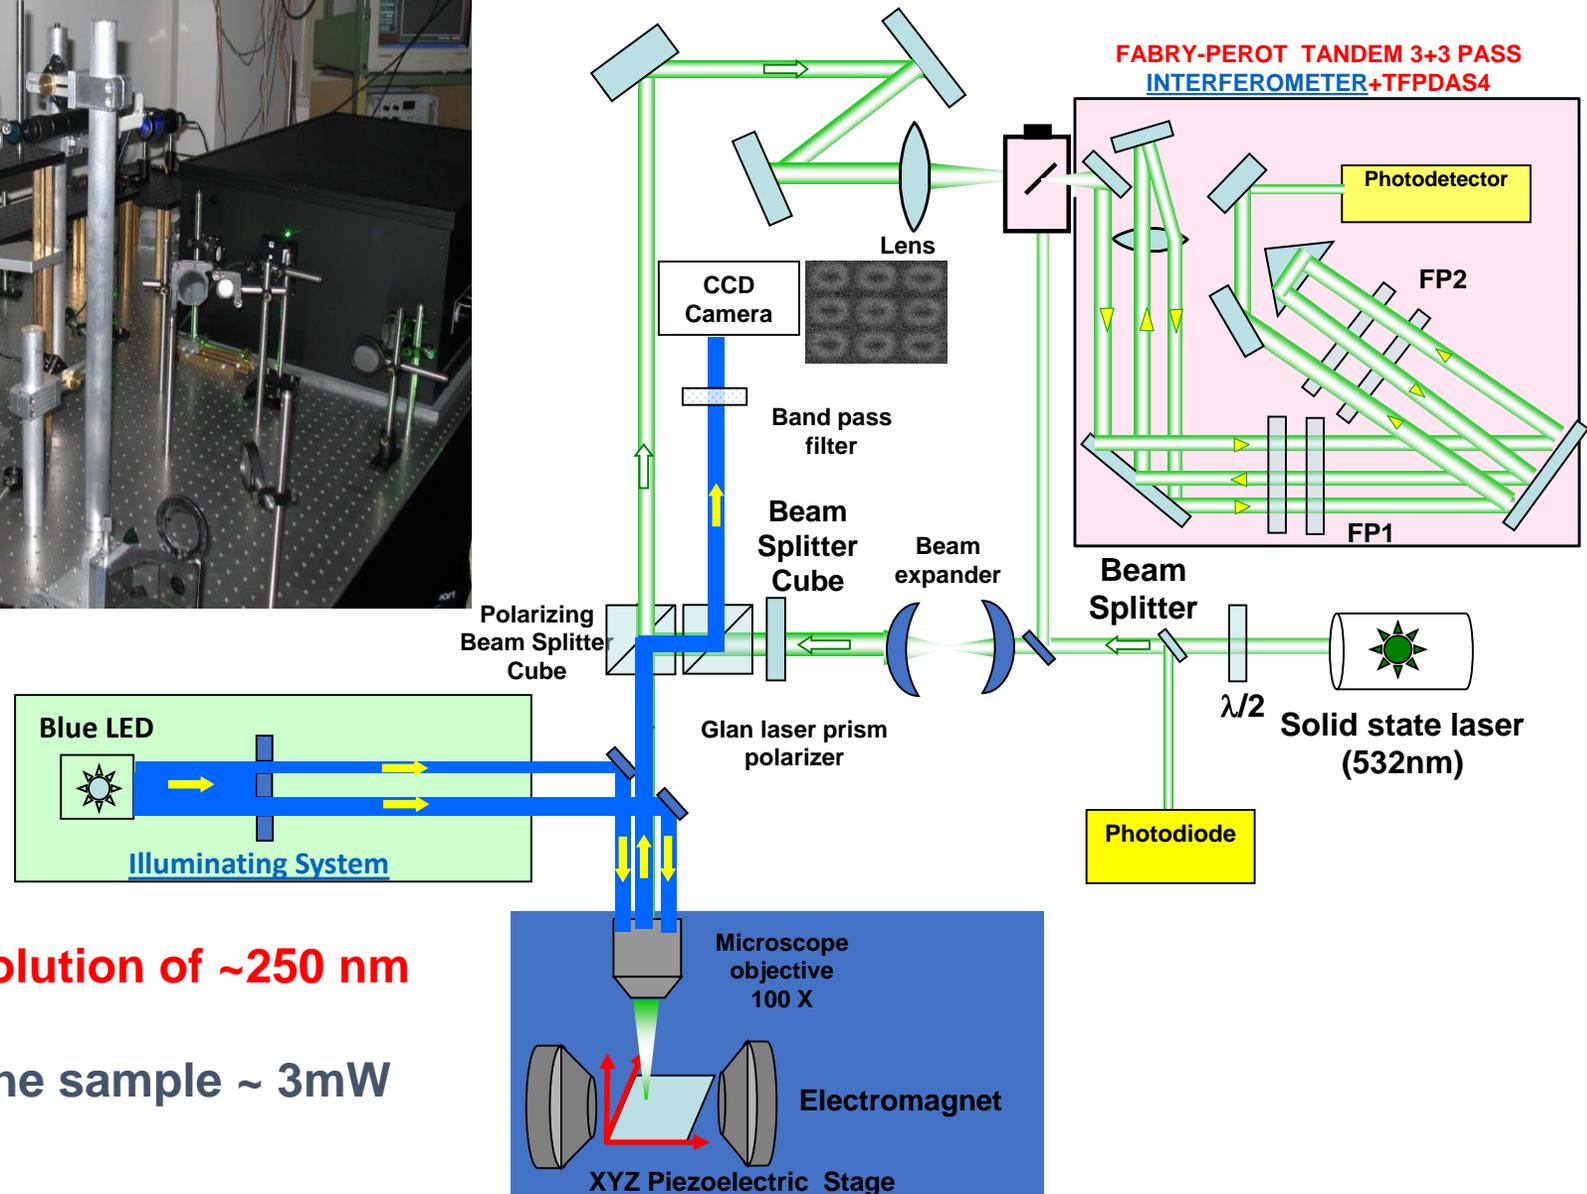

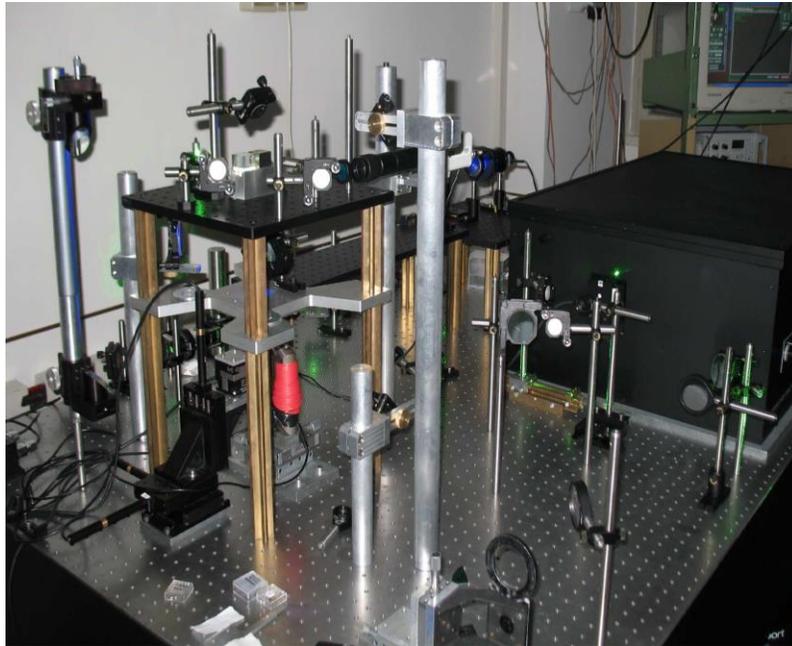

3D. Macroscopic ordered magnetic arrays

(Protein based colloidal crystallization technique)

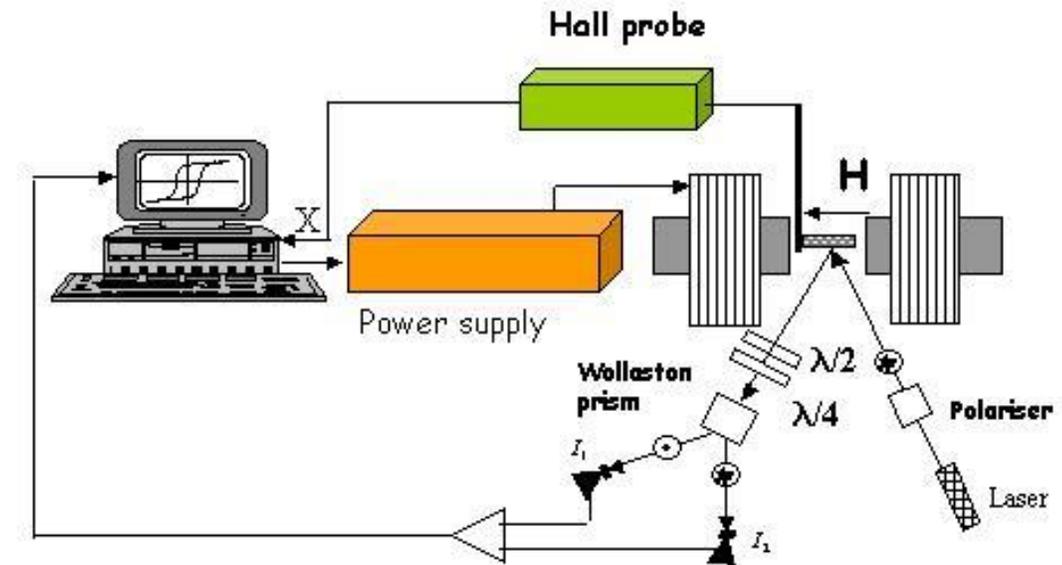

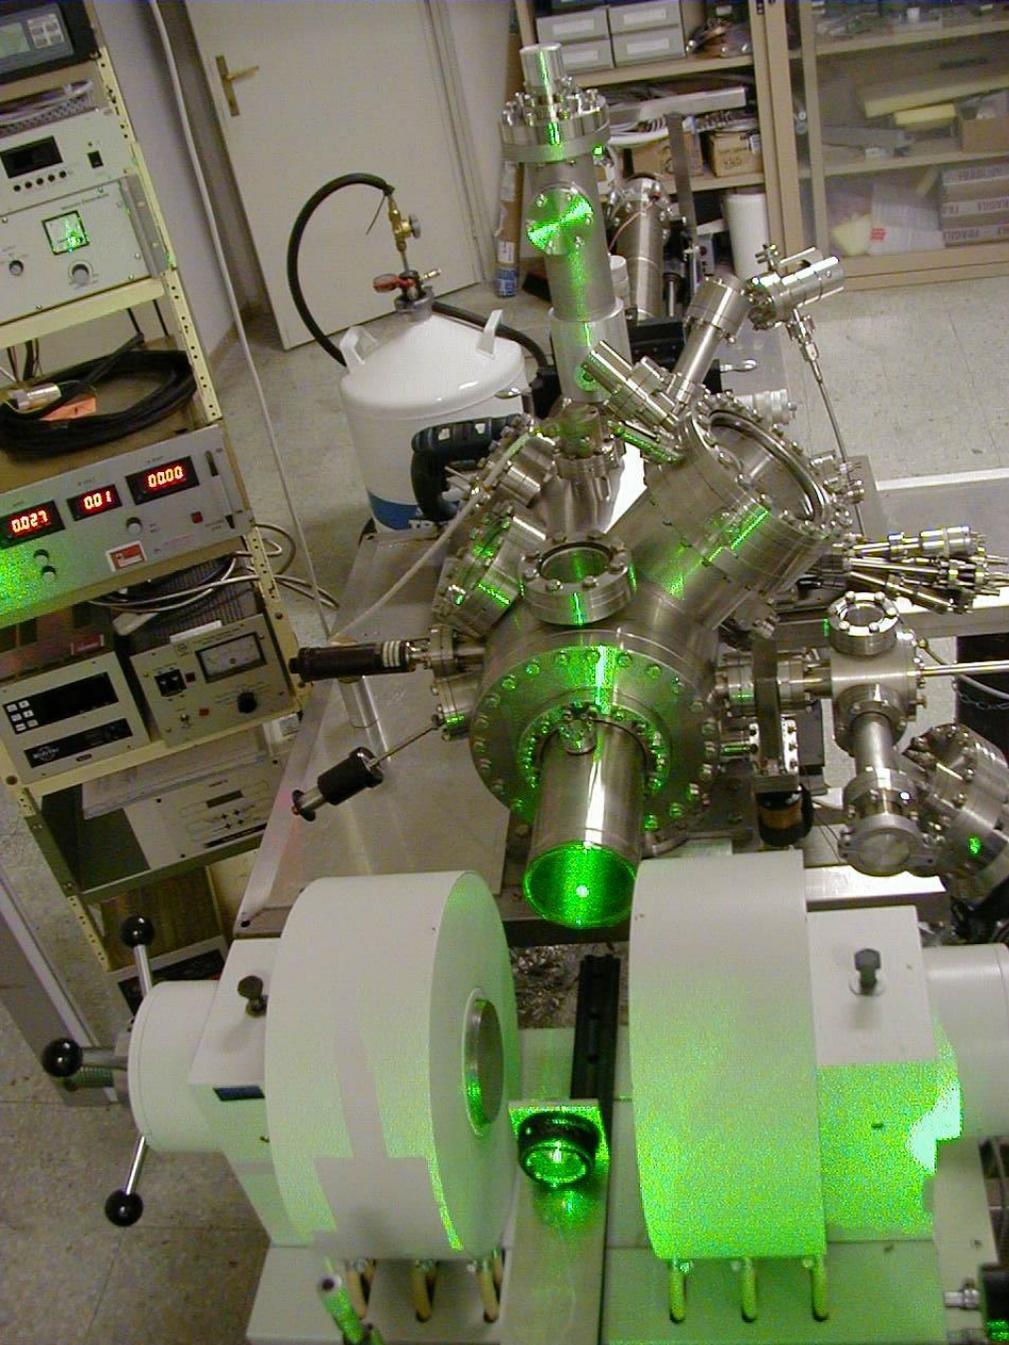

Scanning micro-focused BLS

Lateral resolution of ~250 nm

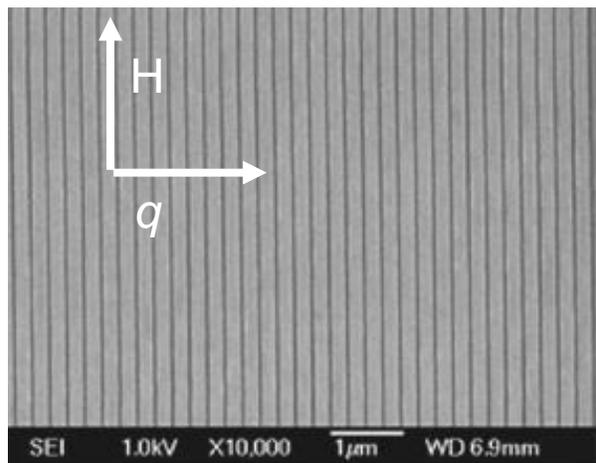

Power on the sample ~ 3mW

In-situ optical measurement (UHV chamber)

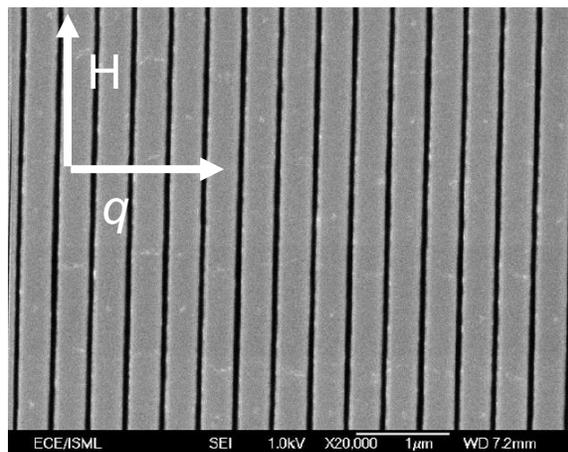

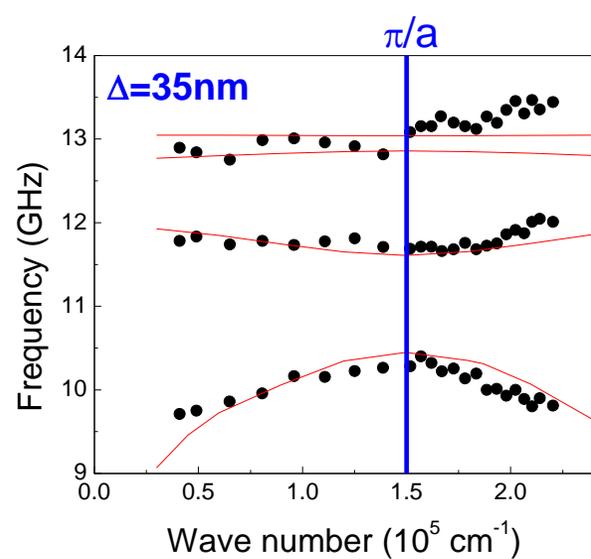

Collective spin modes in dipolarly coupled stripes 1D-magnonic crystal

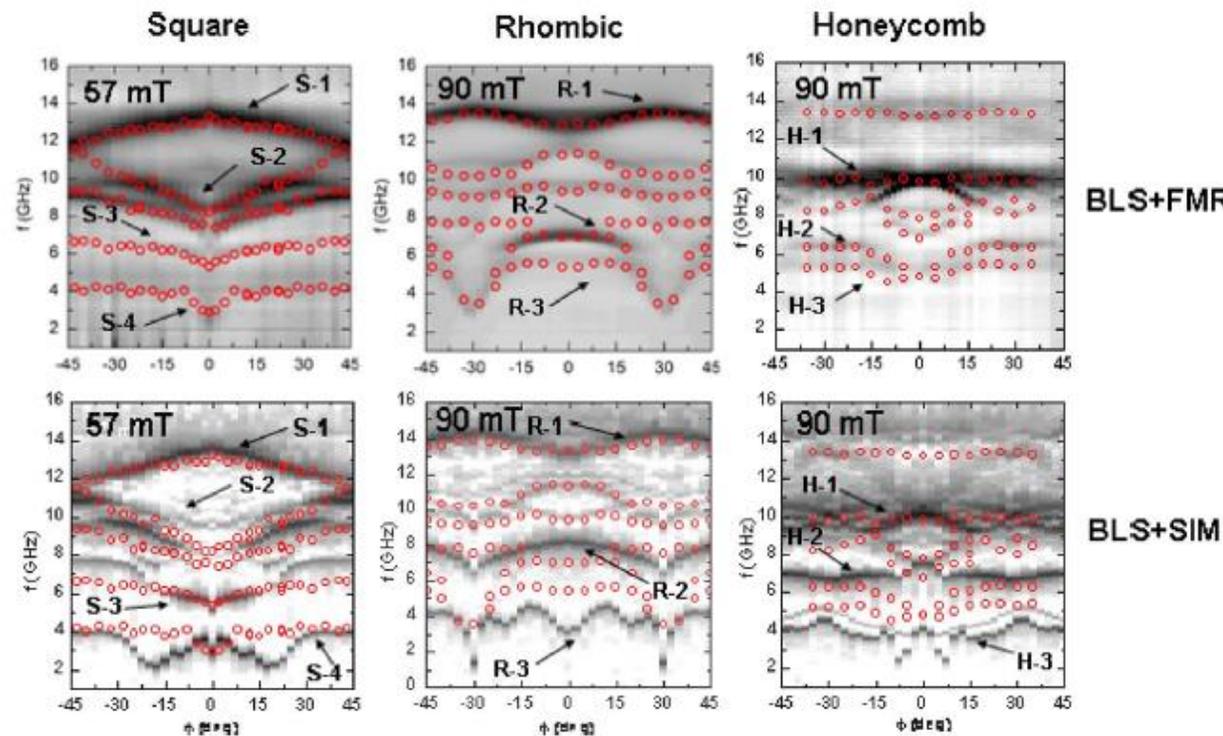

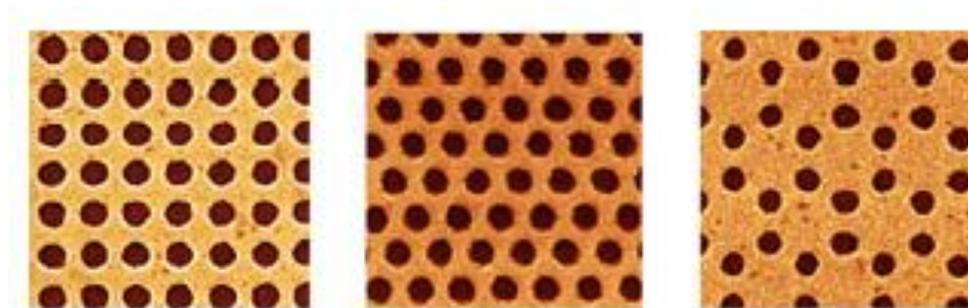

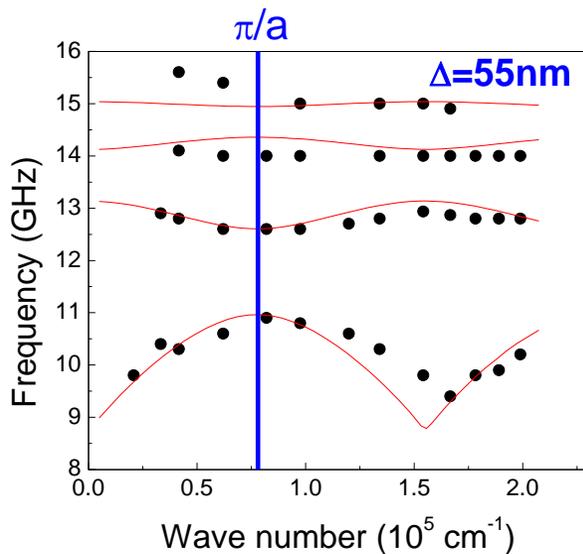

NiFe Antidot arrays with different mesh 2D-magnonic crystal

$w_1 = w_2 = 175 \text{ nm}$; $L = 20 \text{ nm}$
 $a = 210 \text{ nm}$; $B_z = 1.5 \times 10^5 \text{ cm}^{-1}$

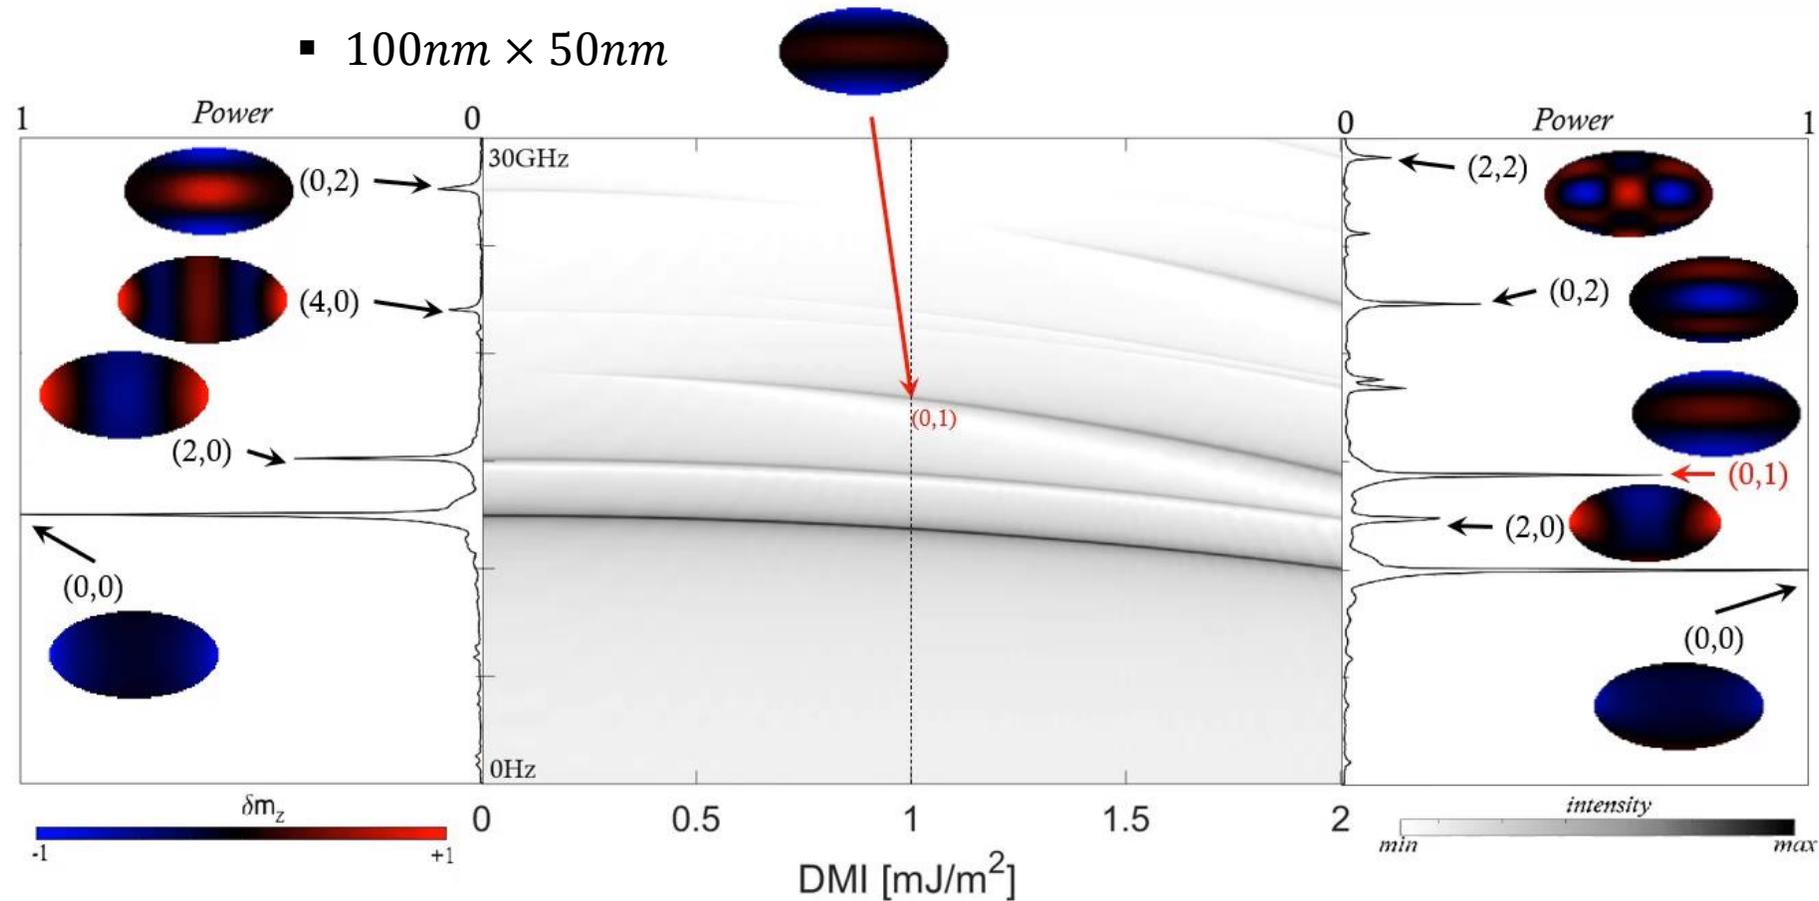

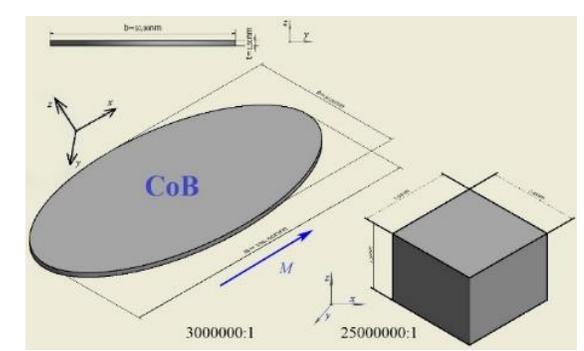

$w_1 = w_2 = 350 \text{ nm}$; $L = 30 \text{ nm}$
 $a = 405 \text{ nm}$; $B_z = 0.78 \times 10^5 \text{ cm}^{-1}$

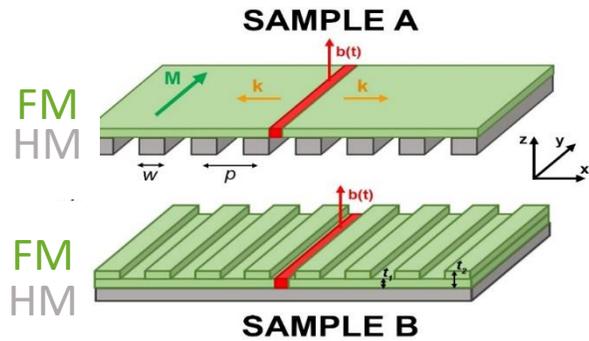

Eigenmodes of elliptical nanodots: a computational study

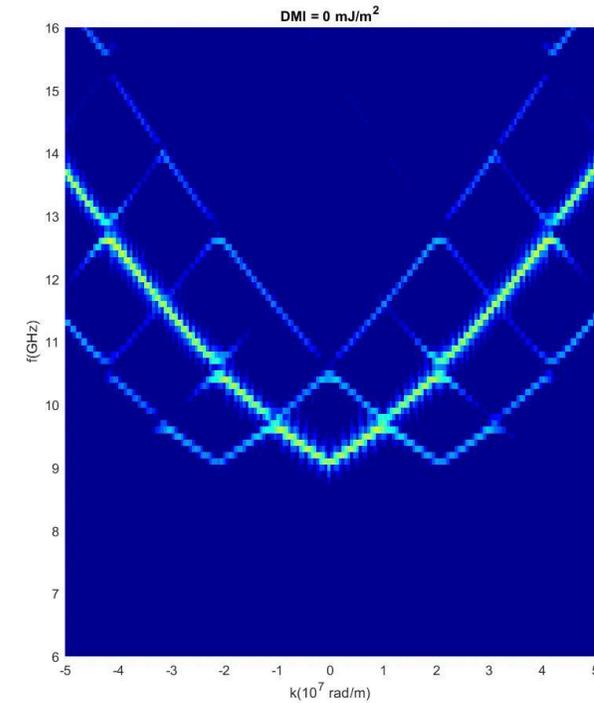

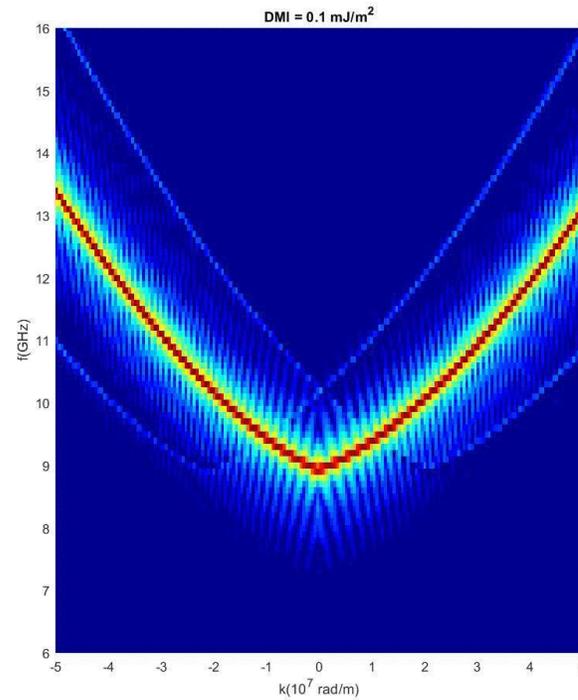

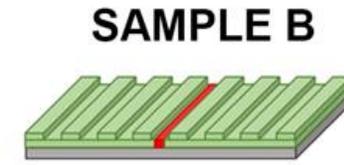

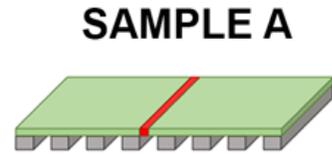

MuMax 3 micromagnetic simulations
Dots saturated along the long-axis
by an external field $H = 1$ kOe
Thickness $d = 1.5$ nm

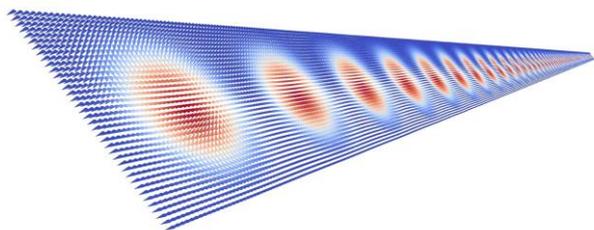

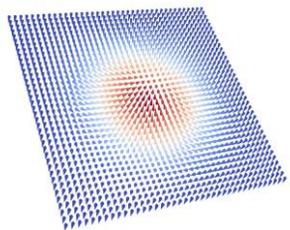

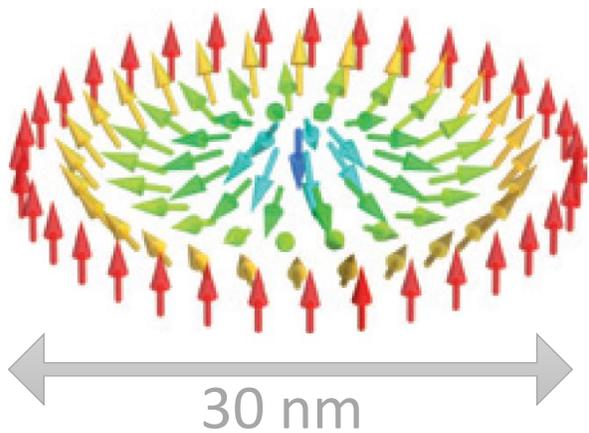

Band structure of 1D-MC consisting of alternated stripes

	M_s	730 kA/m
	A	10 pJ/m
	p	300 nm
	w	150 nm
SAMPLE A	t	2 nm
SAMPLE B	t_1	2 nm
SAMPLE B	t_2	4 nm

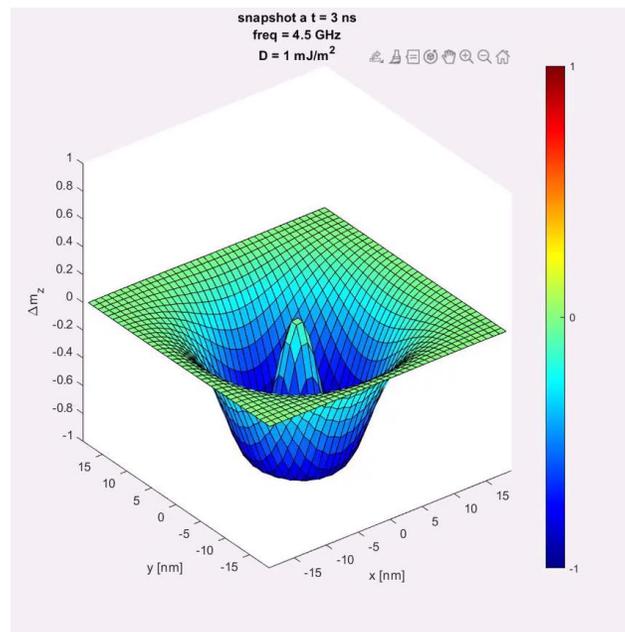

Eigenmodes of Néel Skyrmions

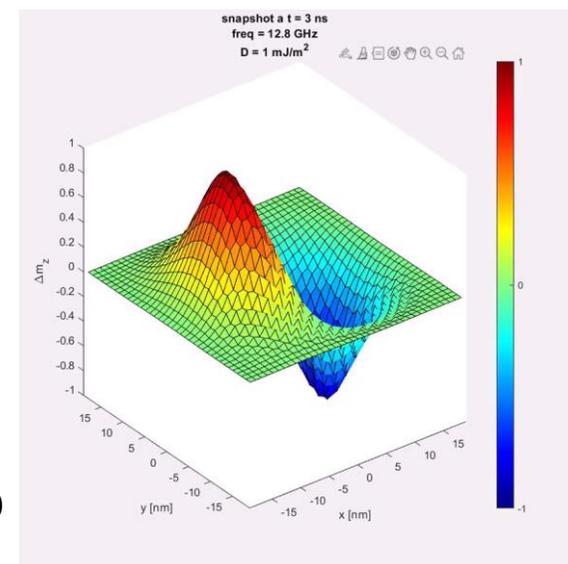

CCW
(0.8 GHz)

BR
(4.5 GHz)

CW
(12.8 GHz)

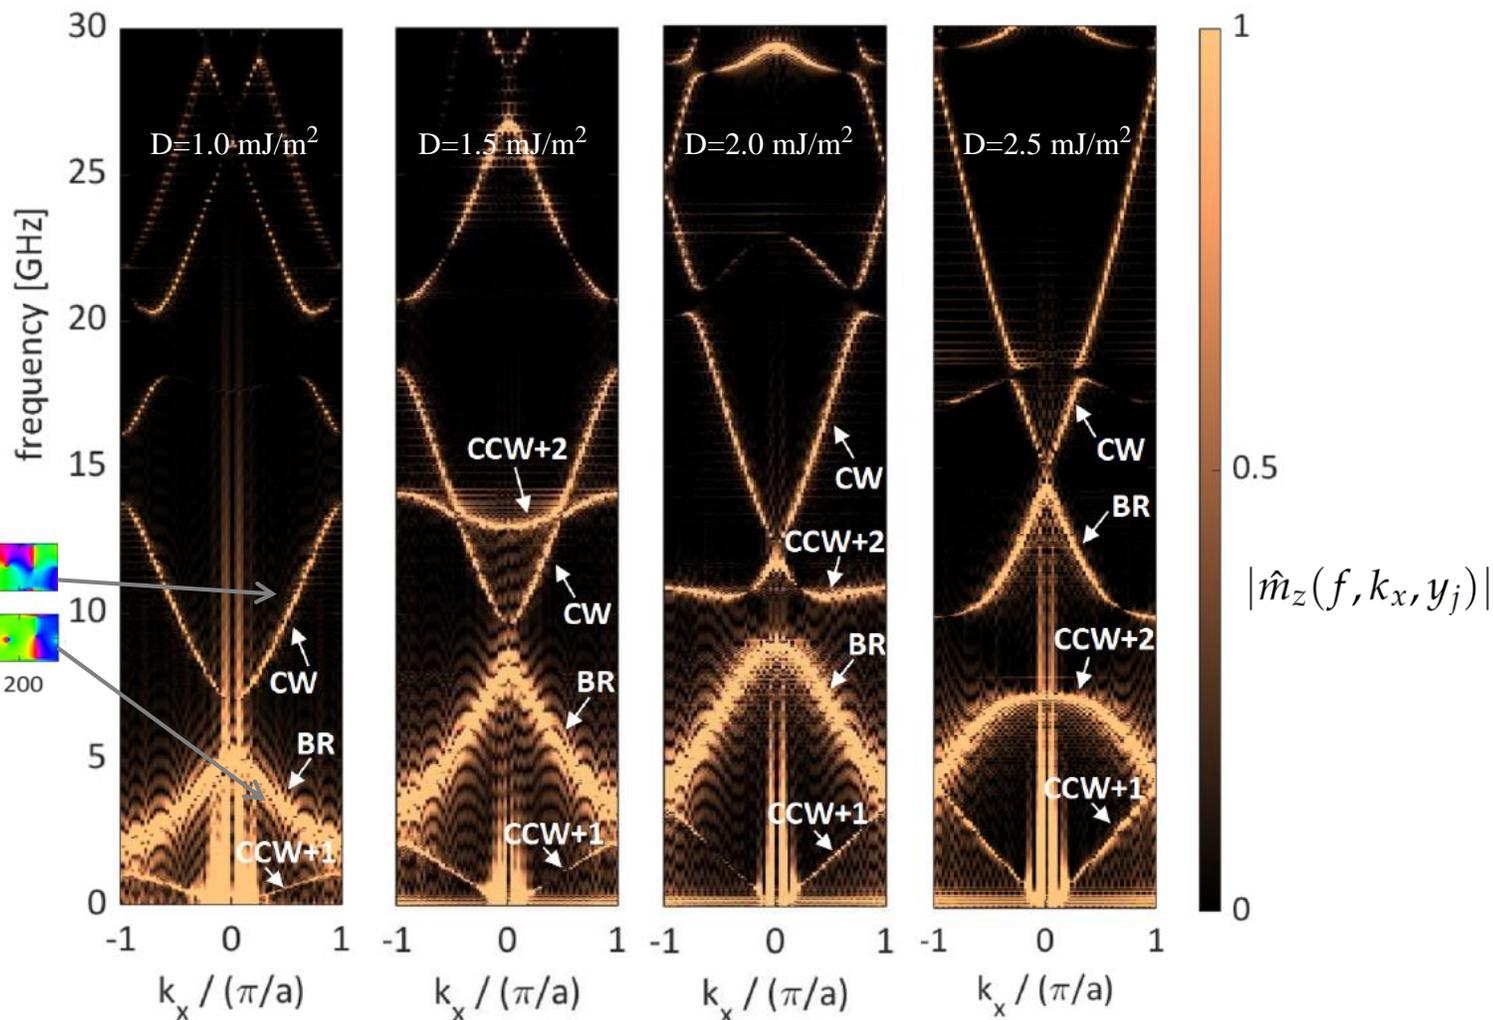

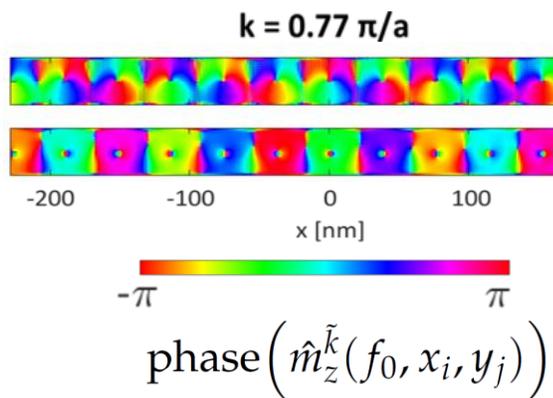

Chain of skyrmions: 1D magnonic

$$\vec{B} = (0, 0, B_{\text{ext}}(t))$$

Magnonic bands, with either positive or negative dispersion, are formed starting from the eigenmodes of the isolated skyrmions (low-DMI)

Nanomagnetismo@UniPG

- ✓ Sistemi nanoscopici con proprietà che emergono quando la dimensionalità viene ridotta alla scala nanometrica.
- ✓ Possibilità di formazione e training sia teorico che sperimentale.
Simulazioni numeriche agli elementi finiti
- ✓ Stretta connessione con AiMagn (Italia) e Spintronic Factory (EU)
